INDIVIDUALIZED LEARNING PLAN - TEMPLATE

Use the template below to develop an individualized learning plan for your co-op/work term. This learning plan should reflect what you would like to achieve during your co-op/work term and how you will attain your goals. If you have secured a role, reviewing the job description of your position will help you develop these learning goals. If you have not yet secured a role, think of a potential job within your field of study and identify specific skills and goals you would like to attain using the knowledge you have gained throughout your program (these goals should then be updated once you have secured your co-op/work term to reflect your actual role and goals).

Include at least four (4) goals in your learning plan, with one (1) goal being a program learning outcome for your academic program of study (refer to your academic program page on Seneca’s website to review your program learning outcomes).

Learning Goal I want to learn....	Strategy I will learn by...	What Success May Look Like Accomplishing my goal may look like...	Target Date	Post Co-op/Work Term Evidence of Success Note: This is to be completed after your work term and it is for your own reflection. This section can also be a part of your discussion in the mid-term site visit
EXAMPLE: <i>I want to learn more about different programming languages that were not extensively focused on or covered in class and be able to apply them during my work term on various projects and working alongside my new team members.</i>	<i>I will learn by engaging in self-learning. I will use my research skills and various online resources to learn and practice the programming languages that I am not familiar with as they will become a great asset to me during my work term and career.</i>	<i>Accomplishing this goal will be demonstrating my newly acquired skills and programming languages in various projects at my workplace. Accomplishing my goal may also require me to take initiative and offer to work on projects where these new languages are being used to test my skills.</i>	<i>July 1, 2019 (halfway through my work term)</i>	<i>I have developed a strategy to learn new programming languages on my own and can learn them quickly. I have illustrated and demonstrated at least one new programming language successfully and according to company standards in my workplace and/or with my colleagues on a particular project.</i>
GOAL #1: Learn to Solve problems by designing, coding, testing, and designing in an optimal way	I will learn this by engaging in the creation of microservices/software in an agile environment. By getting cooperation in software development, I will work around client needs and solve problems by coding and or designing, testing programs.	Accomplishing this goal would look like creating, coding and engaging in the development of microservices/software. It will demonstrate my coding, testing and design skills in all and any projects in my workplace. It will also allow me to see how my fellow co-workers engage in problems, how they solve their problems and will help me learn to solve problems and design as they do.	May 15, 2025 (Near the start of my work term)	
GOAL #2:	I will learn this by asking, engaging and observing the habits and	Accomplishing my goal my look like, re-reviewing/reading my co-workers code in my	July 10 th , 2025 (A bit over

Learn more about the habits/best practices of more experienced programmers	practices of the senior programmers/workers.	spare time, observing the shortcuts, asking for help, understanding why they choose 1 method over the others. This will allow me to create/build better habits and allow me to demonstrate newfound practices and habits in coding for various projects.	halfway)	
GOAL #3: Learn To write better unit tests.	Asking how my fellow co-workers create and what they think about before creating unit tests, alongside looking at previous unit's tests.	Accomplishing this goal will require me to take the initiative to both ask about their thought processes and mainly for me to go back and read their existing unit tests and try to reason how they got them. This will allow me to demonstrate well-defined and thoughtful unit tests.	July 20 th , 2025	
GOAL #4: Learn to better apply data communications, networking, and security concepts	I will learn by self-learning the company's existing software, learning how it interacts and engaging with other more experienced co-workers with questions and research into topics I am less aware of	Accomplishing my goal will allow me to demonstrate both better knowledge in how security concepts play a role into companies but also, how to better integrate data communications and networking programming into other various and related projects	August 10 th , 2025
