

Jethro V1 AI Mouse

The Jethro AI mouse is a revolutionary device that integrates artificial intelligences within the mouse itself to provide a more streamlined and simpler workflow. Other than it's AI capabilities, it's a standard lightweight wireless mouse at only 68g and a battery capacity of 400mAh. Following the same general ergonomic design, as regular mice, while having 3 buttons (aside from the basics), 1 for DPI and 2 at the side for the microphone and 1 for the AI access.

This mouse successfully would pass any UI test as it follows the standard of mice design whilst having their new features in a simple, easy to access and minimalist approach. Keeping a simple colour scheme as well as making it easy to remember, this provides for a well defined structure and design that allows for efficient and effective use.

Within recent times, ChatGPT alone has been visited roughly ~3.8 billion times (Duarte, 2025), and rather than the need to use an app or site to utilize AI, this mouse revolutionizes the workflow by already having it built in thus making it more accessible. Although looking up AI may not take much time, the short time it takes adds up and with this mouse, you avoid that. Furthermore, to access AI, you usually need to have an internet connection whereas this mouse provides offline access to AI, and you can access it with your voice. On top of this, it allows you to instantly re-write, summarize, expand or chat with content you choose to highlight and pick.

To start using the mouse, you'd first plug it in as it's wireless, then if you ever feel too tired of writing, you can use the button to the side with the microphone icon and start talking your commands and they'll begin working in real time! Otherwise, if you just wanted to lookup or get help, you can press the other button next to it, the AI one, and it'll bring a popup where you can input and seek any help you would usually from any AI. Furthermore, if you choose to highlight over some text, it'll bring up a smart toolbar that lets you choose between: Translation, Rewrite, Extend, Expand, Shorten, Summarize, Keywords and AI-Chat. Also, when typing, it'll provide real-time feedback for grammar, spelling and other helpful suggestions.
