

Assignment 2

Instructions and Grading Criteria

- This is an **individual** assessment. Please review the college's **Academic Integrity Policy** to ensure that you are completing your work in an academically honest manner.
- In addition to the required functionality, learners are expected to use the coding conventions demonstrated in class, meaningful variable naming, and clearly organized code. Comments are helpful but not required.

Submission Checklist

For your submission to be graded, provide a **zip** file of your project, and a **screen recording** demonstrating the functionality you implemented.

1. Create a zip file of your project

- Name the zip file **A2_firstname_lastname.zip**. **.7zip or .rar files will not be accepted.**

2. Creating Your Screen Recording

- In the screen recording, demonstrate the app running on the emulator, show the relevant output, and explain the code in detail.
- Max 10 mins.

3. Submitting your assignment:

1. Submit the **screen recording** and the **zip file containing the project**
2. If your screen recording is too large, you can upload your screen recording to **Microsoft OneDrive** and ensure that the link is set to: "Anyone with the link can view". Paste a link to the recording in the **submission comments**.

Academic Integrity

- This is an individual assessment.
- Permitted activities: Usage of Internet to search for syntax only; usage of course materials
- Not permitted:
 - Communication with others (both inside and outside the class)
 - Discussion of solution or approaches with others; sharing/using a "reference" from someone
 - Searching the internet for full or partial solutions
 - Sharing of resources, including links, computers, accounts

Problem Description

Cooking Class App

Develop a cooking class application for Android using Java. This app will be a culinary companion that offers a variety of recipes, incorporates a cooking timer, and allows users to provide feedback on the recipes.

Set up the app to have a BottomNavigationView which will serve as the main navigation component with four fragments: Home, Recipes, Timer, and Feedback.

Home Fragment (Welcome and Overview):

- Use an ImageView to display attractive culinary images.
- Place a TextView with a warm welcome message and brief app usage instructions.
- Show featured recipes or cooking tips.

Recipes Fragment (Recipe Library):

- Create and use Recipe class.
- List the recipes; use a TextView for the title and an ImageView for the dish's thumbnail.
- Add a detailed activity for each recipe that provides ingredients and cooking instructions.
- Link a Button to initiate a cooking timer specific to that recipe.

Timer Fragment (Cooking Timer):

- Display the chosen recipe name and total cooking time in a TextView.
- Add a SeekBar to adjust the timer for various cooking stages (e.g., preparation, cooking, resting).
- Implement a countdown timer with a TextView to show the remaining time.
- Provide Buttons for starting, pausing, and resetting the timer.
- Use a ProgressBar to visually represent the countdown.

Feedback Fragment (Rate and Review):

- Create a rating system for users to rate the recipe out of 5 stars.
- Use an EditText for users to input their cooking notes or review.
- Include a Switch or CheckBox for users to opt-in to share their feedback with the community.
- Place a Button for submitting their feedback.

Please note: This is an open-ended assignment; you are encouraged to extend the features and functionality if you cover the base requirements.
